

**Cross compilation support** Several variables have been added and some commands have been extended for better cross compilation support:

**BDEPEND** Build dependencies are divided into two classes: BDEPEND for native build tools (CBUILD); DEPEND for dependencies compatible with the system being built (CHOST). See BDEPEND on page 34.

**SYSROOT** The path to the root directory for DEPEND type dependencies. See SYSROOT on page 53.

**ESYSROOT** The concatenation of the SYSROOT and EPREFIX paths, for convenience.

**BROOT** The prefixed root directory path for BDEPEND type dependencies, typically executable build tools. See BROOT on page 53.

**econf** Option --with-sysroot=\${ESYSROOT} is passed to configure, if this option is supported. See ECONF-OPTIONS on page 65.

**has\_version and best\_version** These helpers support -b, -d or -r options, causing the query to apply to BDEPEND, DEPEND or RDEPEND (the default). This replaces the --host-root option. See PM-QUERY-OPTIONS on page 62.

**Environment blacklist** Any environment variable listed in the profile-defined ENV\_UNSET variable will be unset by the package manager. See ENV-UNSET on page 56.

**patch** All inputs valid for GNU patch version 2.7 are supported. Especially, this includes support for git-formatted patches. See GNU-PATCH on page 60.

**nonfatal** In addition to its definition as a shell function, the nonfatal wrapper has now a fallback implementation as an external command. Thus, it can be called from other commands. See NONFATAL on page 61.

**Output commands** einfo and friends no longer use std-out, so inside of command substitution their output won't be caught. See OUTPUT-NO-STDOUT on page 62.

**eqawarn** The eqawarn output command is supported in the package manager itself. See EQAWARN on page 63.

**die in subshell** The die command is guaranteed to work in a subshell context. See SUBSHELL-DIE on page 63.

**domo destination** domo installs the specified files under /usr/share/locale instead of \${DESTTREE}/share/locale. See DOMO-PATH on page 68.

**Controllable stripping** The dostrip -x command can be used to add paths to an exclusion list for stripping of debug symbols, to allow more fine-grained control than with RESTRICT="strip". See DOSTRIP on page 72.

#### Version manipulation and comparison commands

**ver\_cut range [version]** Print the version substring specified by range. version defaults to PV.

**ver\_rs range repl ... [version]** Replace all version separators in range by string repl. Multiple range repl pairs are allowed. version defaults to PV.

**ver\_test [v1] op v2** Check if the relation v1 op v2 is true. v1 defaults to PVR; op can be -eq, -ne, -gt, -ge, -lt or -le.

See VER-COMMANDS on page 73.

#### Removals/Bans

**package.provided** Deprecated since a long time and finally dropped. See PACKAGE-PROVIDED on page 25.

**PORTDIR and ECLASSDIR** No longer defined, because ebuilds should not directly access files in the repository. See PORTDIR on page 53 and ECLASSDIR on page 53.

**DESTTREE and INSDESTTREE** Not defined any more. Use the into and insinto commands instead. See DESTTREE on page 54 and INSDESTTREE on page 54.

**dohtml** No longer allowed. doins -r can be used as a replacement. See BANNED-COMMANDS on page 61.

**dolib and libopts** No longer allowed. The specific dolib.a or dolib.so commands should be used as replacement. See BANNED-COMMANDS on page 61.

# EAPI Cheat Sheet

Christian Faulhammer  
fauli@gentoo.org

Ulrich Müller  
ulm@gentoo.org

Version 7.0  
30th April 2018

## Abstract

An overview of the main EAPI changes in Gentoo, for ebuild authors. For full details, consult the Package Manager Specification found on the project page;<sup>1</sup> this is an incomplete summary only.

Official Gentoo EAPIs are consecutively numbered integers (0, 1, 2, ...). Except where otherwise noted, an EAPI is the same as the previous EAPI. All labels refer to the PMS document itself, built from the same checkout as this overview.

This work is released under the Creative Commons Attribution-Share Alike 3.0 Licence.<sup>2</sup>

## EAPIs 0, 1, 2, 3, and 4

Omitted for lack of space. See version 5.0 of this document for differences between these previous EAPIs.

## EAPI 5 (2012-09-20)

### Additions/Changes

**Sub-slots** The SLOT variable and slot dependencies may contain an optional sub-slot part that follows the regular slot, delimited by a / character; for example 2/2.30. The sub-slot is used to represent cases in which an upgrade to a new version of a package with a different sub-slot may require dependent packages to be rebuilt. If the

<p><b>API 7 (2018-04-30)</b></p> <p><b>Removals/Bans</b></p> <p><b>Additional Changes</b></p> <p><b>use</b> Usage for this helper function is <code>USE flag</code>.</p> <p><b>has_version</b> The <code>in-use</code> function returns true if the USE flag given as its argument is available in the build for the current ABI.</p> <p><b>get_LibDir</b> The <code>get_LibDir</code> command outputs the <code>LIBRARY_USER</code> directory basename suitable for the current ABI.</p> <p><b>remove</b> The <code>remove</code> command outputs the <code>LIBRARY_USER</code> directory basename suitable for the current ABI.</p> <p><b>install</b> No longer allowed. Use <code>make install</code> as replacement. See <code>BANNED-COMMANDS</code> on page 61.</p>	<p><b>Pathnames</b> Both absolute paths and paths relative to the working directory are accepted as arguments.</p> <p><b>txz files</b> Suffix <code>.txz</code> for <code>xz</code> compressed tarballs is recognised. See <code>UNPACK-EXTENSIONS</code> on page 75.</p> <p><b>empty-groups</b> These paths specified by <code>ROOT</code>, <code>EROOT</code>, <code>D</code>, and <code>ED</code> no longer end with a slash. Thus, default paths inside them are now empty (for example, if there are only unmatched use dependencies inside of them).</p> <p><b>new-dependency-groups</b> These groups now evaluate to false when they are empty (for example, if there are profiles instead of regular files). This is intended to be used in overlays only. See <code>PACKAGE-MASK-DIR</code> on page 19 and <code>PROFILE-FILE-DIRS</code> on page 24.</p> <p><b>package.* and use.*</b> These profile files can be directly used. * These profile files can be directly used instead of regular files. This is intended to be used in packages. * These profile files can be directly used instead of regular files. This is intended to be used in packages.</p>	<p><b>EAPI 6 (2015-11-13)</b></p> <p><b>Additions/Changes</b></p> <p><b>stable_use</b> <b>stable_use</b> masking/forcing New files use <code>stable</code>.</p> <p><b>stable_use</b> <b>stable_use</b> masking/forcing New files use <code>stable</code>.</p> <p><b>stable_use</b> <b>stable_use</b> command permits options. See <code>ECONF-OPTIONS</code> on page 66.</p> <p><b>stable_use</b> The <code>stable_use</code> command is a simplified substitute for <code>patch</code>, implemented in the package manager. The patches from its file or directory arguments are applied for <code>patch</code>, which are similar to their non-stable counterparts, but act only on packages that would be merged due to a stable keyword. See <code>STABLERMASK</code> on page 25.</p> <p><b>slot_operator_dependencies</b> Package dependencies can specify one of the following operators as a suffix, which will affect updates of runtime dependencies:</p> <ul style="list-style-type: none"> <li>* Any slot value is acceptable. The package will not break when its dependency is updated.</li> <li>= Any slot value is acceptable, but the package can slot (or sub-slot).</li> </ul> <p><b>profile_USE_injection</b> Apart from the USE flags explicitly listed in <code>USES</code>, additional flags can be implicitly provided by profiles. See <code>PROFILE-USC-INJECT</code> on page 57.</p> <p><b>at-most-one-of-groups</b> In <code>REQUIRED-USC</code> you can use <code>?? ( FLAG1 FLAG2 ... )</code> to allow zero or one USE flag out of many. See <code>AT-MOST-ONE-OF</code> on page 35.</p> <p><b>parallel_tests</b> The default for <code>src-test</code> runs make without -j now. See <code>PARALLEL-TESTS</code> on page 44.</p> <p><b>econf_changes</b> The <code>econf</code> function now always passes <code>--disabled-silence-rules</code> to <code>configure</code>. See <code>ECONF-OPTIONS</code> on page 65.</p> <p><b>use</b> Usage for this helper function is <code>USE flag</code>.</p> <p><b>has_version_and_best_version_changes</b> The two helpers support a <code>--host-root</code> option that causes the query to apply to the host root instead of <code>ROOT</code>.</p> <p><b>use</b> Usage for this helper function is <code>USE flag</code>.</p> <p><b>use* standard_input</b> The new <code>*</code> commands read from standard input if the first argument is - (a hyphen).</p> <p><b>EBUILD_PHASE</b> This variable is very similar to <code>EBUILD_FUNC</code>, but contains the name of the current build function. See <code>EBUILD-PHASE-FUNC</code> on page 55.</p>
